

Why do I need a *visualiser*?

An Elmo Visual Presenter will transform your presentations and videoconferencing sessions, providing an instant and easy-to-use interactive presentation resource.

Described as a Visual Presenter, Digital Visualiser or Document Camera, this is the most versatile of all electronic visual aids for group presentations. It comprises a video camera mounted above a working surface with zoom and focus capabilities.

The visualiser enables a digital image of anything placed on the work surface to be displayed via a monitor screen or a projector. With the ability to zoom in and display the tiniest detail from books, maps, photographs, documents or solid objects like micro-chips or printed circuits – it will also show moving, live specimens in giant, living close-ups on screen.

New!
